Public Benefit

- Credible and reliable statistics are fundamental to stable societies
- Transactional (admin) data is produced as we interact with public services. In turn, this data should be used to improve these services and to help everyone make decisions.

Starting from the basics...

ONS is the UK's largest independent producer of official statistics and the recognised national statistical institute of the UK.

Better Statistics, Better Decisions

Transparency

<https://www.ons.gov.uk/aboutus/transparencyandgovernance/lookingafterandusingdataforpublicbenefit>

Looking after and using data for public benefit

How we use, manage and secure data, while providing the best standard of statistical information for the public.

Looking after and using data for public benefit

A summary of the factors that inform our data strategy.

Data and security strategies

Our strategic approach to data use and security.

Data management framework

An overview of the comprehensive framework that ensures effective and secure data management.

Data and security principles

The fundamental principles which support the framework for data management and security.

Policies

Our data and security policies that underpin our data principles.

Data standards

Rule-based data standards that support our principles and policies, informing how systems are configured and operated.

Data we use

A collection of administrative and commercial sources of data.

Contact information

Contact information for any questions or feedback.

Better Statistics

- Admin Data Census - <https://www.ons.gov.uk/census/censustransformationprogramme/administrativedatacensusproject>
- Improved Economic Statistics – timeliness, accuracy and breadth

DATA SCIENCE FOR PUBLIC GOOD

Understanding the characteristics of high growth companies using non-traditional data sources

High growth businesses drive economic growth in the UK. Therefore, understanding the characteristics that may lead to high performance is an area of active research.
